The Twin Cam 96Ci is a high-powered engine produced by Harley-Davidson Motorcycles. The engine was released in 2007 and, according to Harley-Davidson, the Twin Cam system provides cleaner burning and improved engine performance. The Twin Cam 96 engine replaced the Twin Cam 88, which was produced between 1999 and 2006. Engine Specifications

*Harley Davidson: Twin Cam 96ci Engine Specs*

The Harley-Davidson Twin Cam are motorcycle engines made by Harley-Davidson from 1998 to 2016. Although these engines differed significantly from the Evolution engine, which in turn was derived from the series of single camshaft, overhead valve motors that were first released in 1936, they share a number of characteristics with nearly all previous Harley-Davidson engines.

Before you ask, the term "Fat Boy" does refer to the massive appearance this bike has. The 4-stroke, 45-degree V-twin engine pumps out just over 48 HP, more than enough to take 2 people down the roads in leisurely comfort. MCycle mentions that the bike has a top speed of 91.96 MPH and that it weighs 657 lbs.

From 1980 to 1990 it prgressed from 10:50 to a 9:25 in the quarter mile. Terminal speed went from 120 to 138 MPH. Around 1980 it started setting most of the big twin ET and MPH records for its class. It ran in one configuration or another with different engine sizes, but always in the same frame and always with a four-speed transmission.
